To Whom It May Concern

SafeView is a United States based company that provides a state-of-the-art personnel security portal. SafeView's patented technology detects objects composed of metal, ceramic, plastic, wood, or other materials that may be concealed.

The technology was originally developed by a US Department of Energy lab, managed by Battelle Memorial Institute. One of its prime requirements was for it to be a totally safe technology for people and in particular to **NOT** use any form of ionizing (such as x-ray) radiation. The power density levels used by SafeView's portals are about 10,000 times **less** than a standard cell phone.

SafeView's patented "active millimeter wave technology" is the safe, fast, and effective alternative to metal detectors, x-ray machines, and pat down searches at security checkpoints.
